Annual world wide pesticide production is now totaling over 500 billion tons, and increasing every year. There are massive environmental problems associated with the fabrication and introduction of these into the environment. Our vision is a shift from exploitive and poisonous . . . to a healthy and livable world. Our vision is a life lived healthy. Many lives living healthy. Our current food system is exploitative, insane. People’s physical and mental health depend heavily on a healthy environment with which to engage. The health of our land and our health can be greatly increased with the use of sustainable, organic, and local foods. We wish to ensure the vitality of our lives and lives to come.
